

SUCHITHRA BALAKRISHNAN

• suchithra04@gmail.com • [linkedin.com/in/suchithrabalakrishnan](https://www.linkedin.com/in/suchithrabalakrishnan) • [Suchithra Balakrishnan](#)

SKILLS

Languages & Libraries: Python, R, SAS, MATLAB, SQL, Pandas, NumPy

Machine Learning & AI: Scikit-learn, XGBoost, LightGBM, RandomForest, SpaCy, NLTK, LangChain, LanGraph

Data Engineering & Cloud: Snowflake, MySQL, dbt, AWS (EMR, Athena, S3), PostgreSQL, MongoDB, Airflow

Visualization & Reporting: Matplotlib, Seaborn, Plotly, Power BI, Tableau, Google Analytics, Excel

MLOps & DevOps: Git, Github Copilot, Claude Code

WORK EXPERIENCE

Senior Manager, Data Science & Analytics, Fidelity Investments, MA

Dec '21-Present

- **Analyzed vulnerability data patterns** across security scan results, threat intelligence, and asset inventories to co-develop a **structured risk prioritization decision framework** with security SMEs, then designed and authored **dbt SQL** transformation models in **Snowflake** to implement it end-to-end, converting raw vulnerability signals into systematic, organization-wide risk scoring logic published in **Power BI** dashboards
- Architected a proof-of-concept **insider threat and data loss prevention solution** by querying and aggregating **large-scale user activity logs** in **Snowflake** and **Python**, applying supervised and unsupervised techniques including **XGBoost** and **Autoencoders** to detect **anomalous user behavior** and **mitigate data loss risks**
- Collaborated with the **Fraud Prevention team** to evaluate and enhance digital transaction ML models, applying rigorous analytical frameworks to improve model robustness and fraud detection capabilities
- Developed **XGBoost classifier** model to **reduce false positives in employee trade compliance alerts by ~20%**, significantly reducing alert fatigue for compliance teams
- Improved **international Anti-Money Laundering (AML) transaction ML model performance by ~10%**, identifying new signals, enhancing the model's ability to detect suspicious financial activity
- Designed and championed **data science model development, deployment standards, and governance best practices**, enabling cross-functional data science teams to adopt sound methodologies, standardized tooling, and reproducible workflows through hands-on examples and targeted training
- Mentored and supported the technical growth of **junior data scientists and interns**, providing guidance on rigorous analytical thinking, modeling strategies, and best practices
- Led two semester-long Fidelity Investments-sponsored capstone projects for 3 years in partnership with **Boston University**, guiding approximately 15 students per cohort on cutting-edge topics including **evaluating LLMs for performance efficiency across model sizes** and **assessing knowledge base quality for RAG systems**
- Built **analytics solutions leveraging code commit and DevOps data** to identify patterns in development workflows, delivering actionable frameworks and training programs to help developers build more robust, higher quality code and accelerate time to market
- Conducted **independent evaluation of a third-party AI/ML vendor solution**, performing comprehensive technical and strategic analysis and presenting findings and recommendations to business stakeholders and leadership to inform enterprise technology investment decisions
- Built an **MVP ML model for IT risk prediction**, improving change management ticket risk classification accuracy by **~30%** to enable more effective prioritization and resolution

Data Scientist/Statistician II, MAPFRE Insurance, MA

Oct '19-Dec '21

- Led development of multiple production-grade **predictive models spanning regression, decision trees, and neural networks** leveraging customer demographics, claims, and transactional data to drive measurable improvements in **fraud detection, claims handling, and customer retention**
- Spearheaded the **first-ever REST API-based ML model deployment** using an internal MLOps platform in AWS for **fraud detection**, architecting the end-to-end pipeline from model development to production deployment
- Led the **migration and modernization of a legacy SAS fraud detection model to AWS (EMR, Athena, S3)**, collaborating with MLOps infrastructure team to deliver significant gains in **processing speed, deployment efficiency, component reusability, and end-to-end model traceability**
- Conducted independent **evaluation of third-party Data Science vendor solutions**, performing comprehensive technical and strategic analysis and presenting findings and recommendations directly to **senior leadership** to inform enterprise-wide technology investment decisions
- Architected a **statistical data drift monitoring system**, engineering dynamic threshold-based **alerting across key KPIs for production models** for detection of data and model quality degradation before business impact
- **Mentored and onboarded** junior data scientists and data analysts, providing guidance across technical skills, tooling and best practices, fostering a culture of continuous learning and knowledge sharing within organization

Data Analyst II, MAPFRE Insurance, MA

Jun '18-Oct '19

- Reduced manual processing time by an estimated **20% by engineering an automated text extraction pipeline** in Python using **pdf2image and Tesseract OCR** to process thousands of scanned incident and police report PDFs, enabling efficient extraction of key data points for downstream predictive modeling and analytics
- Developed a **SpaCy NLP proof-of-concept model** to automatically extract and classify accident severity indicators from claims representative incident reports, successfully presenting the model's business value to stakeholders and receiving strong organizational endorsement to streamline claims processing workflows
- Architected and maintained scalable **SAS data preparation and integration pipelines** across multiple projects, engineering and cleaning data from hundreds of source system tables to power fraud detection, claims handling, and customer retention predictive models
- Designed and automated **end-to-end model monitoring and performance evaluation frameworks** in Python, SAS, Excel and Power BI across multiple production models, tracking critical metrics and delivering actionable performance insights to fraud, claims, and customer retention business units on a monthly and quarterly basis

Consumer Analytics and Insights Data Science Co-op, Fidelity Investments, RI

Jan '18-Jun '18

- Developed an **anomaly detection model** in R to **monitor and detect data drift, missing data, and unexpected shifts in input features**, like consumer demographics and transactional data, across production ML models, engineering an automated alerting pipeline to enable proactive triaging and corrective action by model owners
- Conducted **ML model audits** across several production models by building a model inventory system, partnering with model owners and stakeholders, analyzing performance dashboards to assess model health, relevance and usage, identifying stale or underperforming models and recommending retirement or retraining
- Researched and synthesized global AI/ML governance best practices into a proposed framework covering data and model standards across the ML lifecycle, presenting recommendations to data science teams for adoption

Graduate Qualifying Project Data Science Intern, MAPFRE/Verti Insurance, MA

Jan '18-May '18

- Developed and implemented customer segmentation models using **K-Means and Hierarchical Clustering in Python**, leveraging customer demographic and web behavioural data from their digital quote platform to identify high-value customer segments and drive conversion from quote to customer
- Engineered end-to-end **data tracking and monitoring pipelines using Google Analytics**, mapping and analyzing customer behavior across the digital insurance quoting to identify drop-off points, enabling data-driven targeting strategies aimed at increasing quote volume to high-conversion audience segments

Data Science Intern, Pacific Northwest National Laboratory (U.S. DOE), WA

Jun '17-Aug '17

- Developed and validated **Python-based regression models** for ZIP load forecasting in power distribution systems, achieving over 80% predictive accuracy across Washington State's power grid, as part of the GridAPPS-D Volt-Var Optimization (VVO) application
- Engineered a **modular, reproducible MATLAB backend** for the Grid Project Impact Quantification (GridPIQ) tool, designing end-to-end data workflows to compute transmission and distribution line losses, serving as a critical input for statewide grid impact assessments
- Architected and deployed **internal and external data scraping and processing pipelines in MATLAB and Python**, building predictive models for the Conservation Voltage Reduction (CVR) and Electrification modules within GridPIQ, quantifying key energy impact metrics including electricity demand reduction and emissions savings attributed to voltage optimization and electric vehicle adoption across the state

EDUCATION

M.S. in Data Science | Worcester Polytechnic Institute (WPI) , Worcester, MA

May '18

B.E. in Computer Science & Engineering | Anna University, Chennai, India

May '16
